PenBlaster

Our new PenBlaster from Abrasive Imaging

This sandblasting pen was specially made for „Sandcarving“ by the mean of sandblasting fine ornaments and halftone pictures without using a sandblasting cabinet. It is not a pressure pot unit! This sandblasting system is based on an injection system.

Our main intention was to serve our customers with a high end sandblasting pen allowing to work accurately and precisely with our Photoresist materials.

Important!

This ergonomic blasting pen contains a little valve to adjust the abrasive / air mixture to achieve a stable abrasive flow. Sandblasting without a cabinet and a dust collector will cause dust, so please be sure to protect your eyes and lung by wearing the right safety equipment and ask for our mobile dust hood.

Technical datas

- Needed air supply = 150l/min
- Rec. Pressure = 3,5bar / 50 psi
- Male coupling DIN 7.2
- Incl. Foot Pedal Release
- Incl. Pressure Reducer
- Nozzle made of carbide - Diameter = 3,2mm
